

# Run Through Banner Basics - By B2bJv.com

Tent Poles or even curtain rods are used in conjunction with the pole loops at either side of your run-through banner. These are the main supports for keeping your banner upright and looking good (shown here in red for illustration)

As an option you can modify your Run-Thru to be able to attach "Guy" ropes (Tent Ropes) here at the side of your Banner. Used in conjunction with tent pegs you can have your banner upright & free standing while still looking good while in use.

Willing volunteers are a simple and more popular way to hold up and steady your Run-Thru

Clubs I have worked with also use their Run-Thru as an opportunity to help bring Sponsors on board

You can use tent pegs through Eyelets at the base of your banner to secure it the weather turns nasty. Obviously this will only work when used on a grassy surface or soft ground.
